

Final Project for SW Engineering CSC648-848 Fall 2025

Team Number: 04

Project/application title and name: ScholarlyGator

Team Lead: Iliana Gallegos/igallegos@sfsu.edu

Front-End Lead: Leigh Apotheker

Back-End Lead: Darien Sngoeun

GitHub Maintainer: Yuhang Wei

Back-End Dev: Jonathan Tsang

Back-End Dev: Roxana Del Toro

Front-End Dev: Megha Rai

URL: <https://team04.duckdns.org>

Date: 12/15/2025

Product Summary

Product Name: ScholarlyGator

Final Committed Functions (P1 Functions):

1. Anyone can browse and search for tutors without creating an account.
2. Users can filter tutor search results by course number, subject tag, or language.
3. Users can open and view any tutor's profile from the search results.
4. Users can create an account using their @sfsu.edu email.
5. Students can see all the messages they have sent inside their dashboard.
6. Tutors can see all messages they have received in their dashboard, including session info and recent activity.
7. Users can log in to access features based on whether they are a student, tutor, or admin.
8. Users can log out to safely end their session.
9. Students can send one message per tutor to prevent spam and keep things simple.

10. Tutors can create a profile that includes their courses, subjects, hourly rate, languages, and availability.
11. Tutor profiles only appear in search results after an admin approves them.
12. Admins can review pending tutor profiles and approve or reject them.
13. Admins can review reported profiles and take action, such as approving, rejecting, removing, or disabling the user.
14. Users must sign in with an @sfsu.edu email to access any private features.
15. The contact form is only available to verified SFSU users.

What Is Unique / SFSU-Specific About the Product:

Our platform is uniquely created for San Francisco State University students and is only accessible to users with an @sfsu.edu email ensuring a secure and SFSU-only tutoring. All tutor profiles and search filters revolve around SFSU courses, subjects, and campus-specific needs. The system includes SFSU-specific features such as admin review workflows for approving tutors and handling reported profiles to maintain quality and safety. Messaging limits and dashboard designs are tailored to how SFSU students interact with tutors. These features ensure that the platform reflects academic success and remains aligned with SFSU policies and student life.

Why students use ScholarlyGator

✓ Verified Tutors

All tutors are verified SFSU students or faculty.

★ Course-Specific Help

Find help by course, subject, or the exact class you're taking.

✉ Secure Messaging

Message tutors through the platform—no need to share personal contact info.

≡ Flexible Scheduling

Schedule sessions that work around your life, not the other way around.

What Students Say

Real feedback from SFSU students who found their perfect tutor

★★★★★

"Alice helped me ace CSC 340! Her explanations of data structures made everything click. I went from struggling to getting an A on my final project."

Emily Chen

Computer Science

Tutor: Alice Nguyen

CSC 340

★★★★★

"Priya's patience and teaching style are incredible. She breaks down complex calculus problems into simple steps. Highly recommend!"

Marcus Johnson

Math

Tutor: Priya Patel

MATH 227

★★★★★

"David is amazing! He helped our team understand Agile methodology and we finished our CSC 648 project ahead of schedule."

Sarah Rodriguez

Software Engineering

Tutor: David Kim

CSC 648

About Us

We are a collaborative learning group at SFSU focused on full-stack web development. Our workflow emphasizes clear communication, short sprint cycles, and measurable deliverables. We meet weekly to plan, pair-program, and review progress.

Google Analytics Stats

Project Management Tools

Tools Used:

Our team used Discord as our main project management and communication platform. We organized our work through a dedicated channel, shared updates, coordinated tasks, and held discussions directly in Discord. We briefly attempted using Google Sheets to track tasks, but it ended up being less effective for our team to use so most of our coordination remained on Discord. Team Meeting Schedule to stay on track and maintain steady progress we aimed to meet three times per week on: Monday, Tuesday, Friday.

These meetings helped us discuss development progress, assign responsibilities, troubleshoot issues, and prepare for each milestone.

Screenshots:

Ili 11/25/25, 9:04 PM

Hey @everyone hope everyone is having a good break so far. These are the assigned P1s that will be due next Friday 12/5. For @Megha Rai and @Roxana del Toro pls get your previous tasks done by this Friday 11/28. If you have any questions please send a message on Discord. There will be a quick message check in on Friday as well. Have a goodnight and happy holidays!

Users

Registered users shall be able to browse and search tutor profiles without having to log in.

Users shall be able to filter search results by course number, subject tag, or language.

Users shall be able to open and view tutor profiles from the search results.

Users shall be able to create an account using their @sfsu.edu email address. -- Darien

Users shall be able to see the messages they've sent in their dashboard. -- Leigh

Users shall be able to see messages they've received in their dashboard (should add an incoming session, recent activity and messages section like in the student dashboard and remove profile status). -- Yuhang

Users shall be able to log in to access features based on their role (student, tutor, or administrator).

Users shall be able to log out to end their session safely. -- Darien

Students shall be limited to one message per tutor to keep things simple and avoid clutter. -- Leigh

Tutors shall be able to create a profile that includes their courses, subjects, hours, languages spoken, and availability. -- Ili

Tutor profiles shall only show up in search results once they're approved by an administrator.

Administrators shall be able to review pending tutor profiles and approve or reject them.

Administrators shall be able to review reported profiles and take action (approve, suspend, or delete). -- Jonathan

Administrators shall require users to log in with an @sfsu.edu email before creating an account.

Administrators shall be only available to verified SFSU users.

Ili 11/19/25, 1:03 PM

@everyone quick reminder we will not be meeting today just Leigh, Darien and I will to discuss tasks that need to be done and hopefully get those to you guys by today. Friday meeting we can discuss them a little bit more if you guys want.

Ili 11/19/25, 10:35 PM

Hey @everyone these are the tasks for everyone to do the the hard set date to complete these by will be on Monday 24th. So that we can assign the P1's right away and work on since we only have 3 weeks left. If you are assigned a task like for example 4, 8, 9, 10 please include fake data so we can see what it looks like and if you are using images just use a public url . Also please communicate with the team if you are unable to do something or having trouble getting something done ahead of time so we can figure it out. We will be doing a quick check in on Friday to explain more about the task if anyone has questions. Have a goodnight!

CSC648 Feedback Plan (1) (1).pdf

November 21, 2025

Ili 11/21/25, 9:52 AM

11/21 meeting : hey @everyone today was just a quick meeting to give a run down of the tasks that were assigned on Wednesday night and to answer any questions regarding them. If you weren't at the meeting and you have questions please just send a message in the group chat. Other than that please remember that the set date to have this done by is the 24th so we can assign P1s as quickly as possible. Hope you all have good weekend/break!

Ili 10/24/25, 10:30 AM

Hey @everyone a little recap of today's meeting: Most of M2 Part 1 is halfway done tasks that need to be completed have been assigned to the members that were present. Task 1 is done, Task 2 and 5: Darien, Task 3: Me, Task 4: Leigh, Task 6: Jonathan to review and edit, Task 7 and 8: Yuhang has already completed just need to be reviewed, Task 9 is done. We will check back in on Monday and hope everyone has a good weekend! (edited)

Yuhang Wei

Jonathan Tsang

Megha Rai

Roxana Alicia Del Toro

Wed 12/10/2025 10:41 PM

A) Role & Contributions

Role: Team Lead + Front-End Contributor

Main contributions:

Led team meetings, organized tasks with my Back-End and Front-End Leads, and followed up to keep everyone on schedule.

Submitted required documentation and coordinated communication for the team.

Completed my assigned items, including improving the Home Page (welcome messaging, friendliness, layout, and simple logo exploration) and supporting the Tutor Profile feature (#9) for courses, subjects, hourly rate, languages, and availability.

B) GitHub Submissions

I made a couple commits to the Dev branch. The number seems small, because a lot of my work involved(not an excuse):

Working on documentation that doesn't show up as GitHub commits

Managing team workflow and meetings

C) Main Challenges

I think the biggest challenges I faced as the Team Lead were keeping everyone aligned, handling different levels of experience within the team, and making sure everyone held the same level of responsibility but also balancing leadership responsibilities with the project and other coursework was also challenging.

D) GenAI Usage

I used GenAI (ChatGPT) throughout the project for debugging, cleaning up code, and improving UI text. It helped speed up problem-solving process and made explanations easier to understand.

E) What I Would Improve Next Time

Next time, I will focus on being a stronger and more consistent communicator. As a team lead I sometimes tried to be too lenient or flexible which made it harder to keep everyone on the same pace. I would distribute the workload more evenly, set clearer expectations earlier, and make sure everyone understands their responsibilities each. Being a little more direct and structured would have helped the team stay more organized and avoid last-minute stress.

Overall Feedback from Team Lead

From a leadership perspective the main challenges were communication, keeping momentum, and helping team members work consistently with Git and React. Still, the team worked respectfully and handled difficulties together. GenAI was useful not only for me but for the whole team when someone got stuck it saved a lot of time. In the future, I'd introduce more structure from the start to make the workflow smoother.

Team self-assessment and contributions

Thu 12/11/2025 12:09

A) Role & Contributions:

Role: GitHub Maintainer + Front-End Developer

Main Contributions:

- Implemented major tutor-related features, including Tutor Edit Profile, Report Tutor, and updates to TutorProfile.jsx.
- Developed key UI components such as Upcoming Sessions, Recent Activity, Messages, and the Tutor Dashboard.
- Built and updated the FilterSidebar and improved the SearchResults page, including search box editing, filter handling, and more responsive layouts.
- Enhanced search functionality, improved URL parameter handling, and refined filter interactions to support both usability and QA testing.
- Performed major refactoring of frontend pages, reorganized folder structure, and removed outdated components to improve maintainability.
- Managed Dev → Main merges
- Finished Milestones with the team and coordinated communication for the team
- Added updated Milestone files (M1, M2, M2 Part 1) and maintained team information pages.

B) Number of submissions: 31 Yuhang Wei

C) Main challenges:

One major challenge I encountered was coordinating team progress when different members had different schedules and worked at different speeds. This sometimes caused delays in connecting front-end components together, and required additional communication and GitHub cleanup work on my side as GitHub Master. However, this helped me learn the importance of proactive communication and clearer milestone planning in a software engineering team.

D) GenAI Usage:

I used GenAI throughout the project for debugging front-end issues, improving code readability, GenAI also accelerated my work by providing clearer explanations of errors and alternative implementation ideas. Overall, it was a highly useful tool that improved both development speed and code quality.

E) What I would improve:

If I were to do this project again, I would establish clearer internal deadlines, smaller task checkpoints, and more structured communication early in the semester. I also learned the importance of documenting component responsibilities to reduce overlap and avoid late merge conflicts. Applying SE process strategies like early prototyping and regular progress reviews would make teamwork smoother next time.

Leigh Ann Apotheker

To:  Iliana Gallegos;  Yuhang Wei;  Darien C Sngoeun; **+3 others**

Mon 12/15/2025 12:22 AM

A. Role and Contributions:

Role: Front-end lead

Main contributions:

- Ensured design consistency across the entire site
- Led the final design of the site-wide color scheme and icon set
- Designed UI storyboards according to design and functionality decisions agreed on by team members
- Built the student dashboard and implemented messaging features to integrate the front-end with the back-end
- Collaborated with team members to develop user personas and use cases

B. Number of commits: 35

C. Throughout the project, collaboration and communication proved to be the hardest. Ultimately, due to communication inconsistencies, it was difficult to maintain distinct tasks for team members at each milestone. Additionally, at times, there was limited team-wide input in design and functionality decisions due to scheduling conflicts and lack of engagement.

D. GenAI did prove to be quite useful in improving articulation and flow of documentation as well as for clarification questions in architecture set-up. Although, in logo idea generation and debugging, it proved to be less useful in my personal experience. Ultimately, it was still very useful overall in expediting some tasks (such as in set-up).

E. In reflecting, I think the addition of more frequent checkpoints for tasks would have been helpful. Specifically, I would increase checkpoints as the milestones became more complex. Additionally, I would have had more discussion and visualization on what are critical path tasks and what are non-critical path tasks to accordingly assign and time tasks from the beginning of the project (which can be performed in parallel, which can't, etc). I would also improve my own commit history to not commit so frequently unnecessarily.

Mon 12/15/2025 5:49 AM

A. Role and Contributions

Role: Back-end contributor

Main Contributions:

- Built main framework of admin dashboard
- Aided in the implementation of integrating front end and backend for admin actions
- Collaborated with other team members to create personas and use cases

B. GitHub Submissions

- I only made 5 commits to the dev branch since I mainly worked with trying to link the frontend and backend as well as big commits to a single page

C. Main Challenges

- Throughout the duration of the project, I encountered lots of challenges such as familiarizing myself with frontend and backend work and trying to communicate effectively with other team members. Due to a lot of scheduling conflicts as well as other factors, some of the tasks were often left up to us to figure out ourselves so that led to some problems with people getting started or effectively doing their tasks.

D. Gen AI Usage

- Throughout the project, GenAI proved to be quite helpful for many things such as debugging, testing code design, learning about how to interact the frontend to the backend, and just learning about coding using Javascript which is a language I am not very familiar with.

E. What I will do next time

- Next time, I will try and focus more on communicating and being more in tune with the pacing of the other team members. Something like more checkpoints might have helped as well for things that required more time and complexity to do like the later milestones. Something like more discussion on direction and visualization would have been more helpful since we were often left to making certain choices as we go on. In addition to this, I would have probably done more commits instead of lumping them all together into a few big ones, since it often led to my pacing being behind others.

As part of Milestone 5, I'm sharing my self-assessment and a summary of my contributions:

A. Role and Contributions

Role: Frontend Developer

Highlights:

- Developed the TutorProfile.jsx component to display tutor details with dynamic availability, profile images, and contact options.
- Built the Posting.jsx form for tutor profile creation/editing, including validation for courses, subjects, rates, and availability.
- Enhanced the TutorDashboard.jsx with better error handling, loading states, and user feedback.
- Added submission rate limiting to the posting form to prevent duplicates and improve usability.
- Helped maintain design consistency across tutor-related pages and ensured responsive layouts.
- Took part in peer code reviews and incorporated feedback to strengthen component quality.

B. GitHub Submissions

- Logged 10+ commits focused on tutor functionality components.

- Key contributions: TutorProfile.jsx, Posting.jsx, TutorDashboard.jsx.

- Actively participated in pull request reviews and team discussions.

C. Main Challenges

- Managing complex form states in the tutor posting form while keeping performance smooth.
- Ensuring seamless integration between frontend components and backend APIs for real-time data.
- Designing responsive layouts that handle complex structures like weekly availability grids.
- Balancing new feature development with code quality and optimization.

D. GenAI Usage

- I used ChatGPT for code review and identifying improvements in React components.
- Generated error-handling patterns and validation logic templates.
- Assisted with debugging React-specific issues and performance optimizations.
- Considered security aspects for form inputs and data display.

E. What I Would Do Differently Next Time

- Begin component documentation earlier in the process.
- Create more reusable utility functions (e.g., time formatting).
- Integrate testing alongside feature development instead of later.
- Schedule more frequent check-ins with the backend team for API alignment.
- Break down larger features into smaller, more trackable commits.

Overall, this milestone has been a valuable learning experience in both full-stack development and team collaboration. I really appreciate the teamwork and support throughout the project--thank you all!

Best regards,

Megha Rai

A) Contributions & Role

- Role: Backend Lead
- Set up the EC2 stack end-to-end: Ubuntu, Nginx reverse proxy, Node/Express, PM2, and MySQL with proper users/privileges and security.
- Designed and implemented the database architecture/schema; created seed data for a reliable demo baseline.
- Built most of the code in application/backend in an MVC structure; implemented and fixed the key API endpoints used by the frontend (search/results, auth/session wiring, etc.).
- Created the deployment pipeline with PM2 deploy + (later) GitHub Actions to build the frontend, rsync static assets, and restart the API.
- Production troubleshooting: resolved CORS/mixed-content issues, disk-full errors, EBS resize, MySQL startup problems, and general reliability.
- Light contributions to UI/UX (layout/flow) to keep the end-to-end experience coherent.

B) Github Submission

- 74 commits total. Many early commits were from stack setup (bringing up EC2/Nginx/MySQL/PM2 and getting the pipeline stable) then feature and bug-fix commits.

C) Biggest Challenges

- Our biggest challenge was communication and coordination. Tasks were occasionally unclear or progressed without shared visibility which caused delays and unexpected merges. We also had code pushed without prior notice. I mitigated by stabilizing the deployment process, documenting changes, and jumping on fixes when blockers appeared, but a clearer process would have helped.

D) GenAI Usage

- I used GenAI heavily for debugging and reference (mainly VS Code Copilot; ChatGPT for stack setup guidance and doc checks). For debugging, it saw issues faster than I would see manually. For code generation the quality varied: backend code often needed more context to avoid hallucinations; frontend was decent but not design-level. Overall: very useful for troubleshooting and boilerplate but I still validated everything.

E) What I'd Improve next time

- Next time I will bring up more suggestions on what we should do regarding task management. This would give everyone real-time status, reduce surprise merges, and align with Agile best practices. As backend lead, I'd focus more on enabling the team instead of doing the work myself. Such as breaking down backend tasks into smaller tasks, pair program, and write starter examples/tests so others can contribute confidently.

Thanks,
Darien Sngoeun
